

OLX & CFH Token Ecosystem Whitepaper

1. Introduction

This whitepaper outlines the OLX and CFH token ecosystem-a utility-driven project designed for real retail users interested in serious charting tools for XRP. The system is built on rewarding users who contribute to and support its infrastructure.

2. Tokens Overview

- OLX: Payment/Discount/CFH rewarding. This token is a way for accessing charting tools (JMS and MAC) with discount capabilities.
- CFH: Revenue-sharing token earned by LPing OLX. CFH represents digital equity in the OLX ecosystem.

3. Utility System - JMS & MAC

The OLX project provides two powerful tools for XRP trading:

- JMS: Predicts market direction (bias) with 80% accuracy.
- MAC: A standalone trading system for identifying trade opportunities with 65% accuracy.

MAC can be used independently as a reliable strategy for entering and exiting trades, but when combined with JMS, the two tools form a highly robust and synergistic signal system. This integrated approach gives traders more precision, confidence, and clarity in volatile market conditions.

4. OLX Token Utility

OLX is used as a payment method and offers discounts for accessing the JMS and MAC utilities, which are the revenue-generating components of the OLX ecosystem. Additionally, LPing OLX earns monthly CFH rewards.

5. CFH Token Utility

OLX & CFH Token Ecosystem Whitepaper

CFH tokens function as digital equity within the OLX ecosystem. They grant holders a share in the platform's monthly revenue, primarily generated through its proprietary charting tools, JMS and MAC. Revenue is distributed in XRP via monthly airdrops to qualifying CFH holders.

CFH is earned by OLX token liquidity providers, rewarding long-term commitment to the ecosystem. To be eligible for revenue sharing, holders must maintain their CFH tokens for at least one full month, which discourages short-term flipping and promotes sustainable participation.

Holders who exit any of their position within the OLX or CFH token will automatically be rejected from that month's rewards and will have to restart the eligibility cycle.

6. Revenue Sharing Mechanism

Both OLX and CFH holders must hold their tokens for at least one month to become eligible for revenue distributions. This cooling-off period prevents abuse and ensures that only committed participants benefit from the ecosystem's success. Distributions occur monthly and are based on platform revenue generated through utility services like JMS and MAC.

Revenue is distributed in XRP and calculated based on the percentage of circulating CFH held by the community, excluding the team-owned portion and any unsold tokens. The more tools are used, the more XRP is available for redistribution-tying ecosystem success directly to real user activity.

Below is a visual summary of the process:

OLX & CFH Token Ecosystem Whitepaper

1. CFH tokens are earned by providing liquidity on OLX
2. CFH tokens must be held for one full month to receive XRP revenue sharing.
3. Selling CFH or exiting the OLX LP early will result in no rewards for that month.
4. XRP revenue is distributed monthly to qualifying CFH holders

1. CFH tokens are earned by providing liquidity on OLX
2. CFH tokens must be held for one full month to receive XRP revenue sharing
3. Selling CFH or exiting the OLX LP early will result in no rewards for that month
4. XRP revenue is distributed monthly to qualifying CFH holders

7. Tokenomics

Total CFH Supply: 990 million tokens.

- 10% (99M CFH) is already circulating, offering an initial 10% revenue share.
- 5% (49.5M CFH) will be distributed over the next 5 years to OLX LPs.
- Depending on market conditions, an additional 5-10% (49.5M-99M CFH) may be distributed in the following 5 years.
- 90% (880M CFH) is held by the team.

825,000 CFH per month will be distributed to \$OLX LP providers.

8. Roadmap & Sustainability Strategy

The OLX/CFH ecosystem is built to deliver sustainable value through a utility-based model anchored in real trading tools and community participation. At its core lies a self-reinforcing cycle: OLX liquidity providers are rewarded with CFH tokens, and CFH holders receive monthly XRP revenue share-creating a unique feedback loop where every layer of the ecosystem supports the others.

CFH acts as a form of digital equity. By holding it for a full monthly cycle without selling, users qualify for XRP airdrops funded by actual revenue from utility sales, such as subscriptions to the proprietary JMS and MAC charting tools. Any wallet that exits its CFH or OLX position during the month forfeits its eligibility, resetting the holding period. This mechanism ensures that only committed participants benefit, preventing short-term manipulation and promoting long-term loyalty.

To further strengthen the system, OLX tokens are used for tool access and offer discounts when used as payment. This increases OLX demand, encouraging deeper liquidity provisioning. As LPs receive CFH in return, the system incentivizes continuous participation and growth.

In the future, the ecosystem may introduce new charting tools, community-driven governance features, and expand strategic partnerships on the XRPL. All developments aim to increase value for users while keeping the economic loop healthy, transparent, and fair.

By aligning utility, rewards, and long-term commitment, OLX and CFH create a structure where real retail users-not speculators-are empowered to benefit from meaningful participation in a growing ecosystem.

9. Target Audience

The OLX ecosystem is designed for retail traders who are serious about using technical tools to trade XRP.

OLX & CFH Token Ecosystem Whitepaper

The system targets real utility users-not meme coin traders-providing them with premium analytics and sustainable value.

10. Conclusion

This ecosystem ensures that both OLX and CFH token supporters are maximally rewarded-not only for their early support but for helping strengthen the token's foundation. With 10% of CFH circulating from the outset and 5% more distributed over the next 5 years, the system offers early investors real and consistent rewards. Based on market conditions, another 5-10% of the supply may be released for distribution over the subsequent 5 years, extending long-term incentives.

The OLX ecosystem is designed for real retail users-those interested in serious XRP charting and analytics, not meme coins.

It provides utility-backed value through high-performance tools like JMS and MAC, offering reliability and insight in volatile markets.
